

# YOUR GUIDE TO BUYING AIRPORT LIGHTS

## What is the light's nominal range?

This tells you how far away the light is visible from.

## Does the light have 360-degree horizontal output?

A 360-degree beam angle is required for plane & ground traffic visibility at airports.

## What is the light's effective intensity?

1 candela (cd) equals the light from a wax candle. Candela is the only SI base unit based on human perspective.

## Where will I be able to place the light?

The best airport light can be used in a variety of environments and locations. Our light withstands extreme temperatures and works on two barricades as well as on a delineator.

## How many modes does the light have?

You want a light that is multi-functional with both Flashing and Steady Burn capabilities.

## Is the light LED or incandescent?

Not only do LED lights replicate incandescent lights, they also last longer and are generally the same cost.

## What is the light's Ingress Protection rating?

Ensure that the Airport Light is protected against water & dust.

## When will I need a replacement?

How long is your light really good for? Do you know who you can call if you run into issues and if it has a warranty?

Wondering which Airport Light is best for you? Get in touch and we will happily help out!
